UMEED E SUBH Website: Complete Plan, Flow and Build Guide

A Struggle for Literate Pakistan | Official Welfare Society of UET Taxila

Stack: Next.js, TypeScript, Tailwind CSS, Neon (serverless Postgres)

1. Purpose of the Website

UMEED E SUBH, founded in 2014, has run for over ten years through physical, on-ground work. The website gives the society an online presence that does four things:

1. **Builds trust** by showing 10+ years of work, 70+ children, results, success stories and transparent drive reports.
2. **Raises funds** through an easy Donate and Child Sponsorship (CSP) flow.
3. **Recruits volunteers** through an online Join a Team form.
4. **Lets the team manage content** through a protected admin panel, so no developer is needed for routine updates.

2. Scope: What Is In and What Is Out

In scope

- Public information pages for all projects, drives and teams
- Impact numbers, reports, success stories, results and gallery
- Donation and sponsorship with manual payment proof
- Volunteer applications
- Contact form
- Admin panel and content management
- Certificate verification (IT Box and Chaddar)

Out of scope (handled offline or by separate tools)

- **Admissions to Pehla Qadam School, IT Box and Chaddar.** These happen physically, when the student or family visits the school near Gate 2, UET Taxila. The website only *informs* people (timings, location, what to bring, when admissions open). It has **no application form and no applicant data** for these programs.

- **Ration Drive and Uniform Drive data collection.** These are being built as **separate web apps** that collect beneficiary data. The main website does not collect or store beneficiary data. It only shows the *results* (counts, photos, reports) after each drive, entered by the admin.

3. Audiences

Audience	What they want
Donors and sponsors	Proof of credibility, clear way to give, where the money goes
UET students	Know the society and join a team
Families in Taxila	Where the school is, timings, what each program offers, how to get admission in person
UET administration, partners, media	Official profile, reports, impact
Society admins	Easy way to publish content and verify donations

4. Society History and Founding Story

UMEED E SUBH was founded in **2014** at UET Taxila, and the website keeps its story, timeline and yearly records in one place.

The complete founding story will be supplied by the society and published on an **Our Story** page. Until it arrives, the page carries the founding year and a short placeholder.

Our Story section	What it holds
Why we started	The need and the idea behind the society in 2014
The founders	Names and photos of the founding members, with their consent
First years	The first activities and the first classes
Growth	How Pehla Qadam, IT Box, Chaddar, CSP and the yearly drives began
Today	Current work, numbers and the way forward

A **timeline** on the About and Our Story pages runs from 2014 to today, with one entry per milestone (for example the start of each project and drive). The Documentation team confirms the years. Timeline entries live in the database, so the admin can add a new one after each year.

5. Organization Structure and Cabinet System

The society is led by a **Cabinet** that changes every year, supported by a **Junior Cabinet** of students. The website stores every year's team permanently as a **Cabinet archive**.

Hierarchy (assumed top to bottom)

Level	Group	Shown on the website
1	Cabinet and Heads	Photo, name, designation, team
2	Co-Heads	Photo, name, designation, team
3	Members	Name and team
4	Executive Members	Name and team
5	General Members	Name and team

Junior Cabinet

A team of students, recorded for each year in the same way as the Cabinet. Every person in a session carries a **body** value, either Cabinet or Junior Cabinet, plus a level and a team.

Cabinet archive

- The Cabinet page lists every session, newest first, back to the earliest record found.
- Each session page shows the Cabinet and Heads, the Co-Heads, team-wise lists of Members, Executive Members and General Members, the Junior Cabinet, a group photo and the drive editions held that year.
- The current session is marked, and it feeds the About and Teams pages.
- Only the Super Admin and the Documentation team can add or change people. Closed sessions are changed only by the Super Admin.
- Public data is limited to name, photo, designation, team and department. Phone numbers, emails and registration numbers stay admin-only.

Open questions

- [ ] Confirm the five levels and their order. What separates Members, Executive Members and General Members?
- [ ] List the Cabinet positions (for example President) so they can be stored as fixed titles.
- [ ] What does the Junior Cabinet do, and how do students join it?
- [ ] Does a session follow the academic year or the calendar year?
- [ ] Are Cabinet lists available for every year since 2014?

7. Projects Overview (Content Source)

Regular projects (working daily)

Project	Key facts
Pehla Qadam School	Evening classes, nursery to matric. Underprivileged children, free of cost, no fee. Taught by UET students with a complete hierarchy. 70+ children. Over 10 years of success. Pass-out stories and annual brilliant results. Located near Gate 2, UET Taxila.
IT Box	7 years. Free computer lab training with certificates and freelancing guidance. Two batches per year for boys and two for girls, in separate classes. 25 to 30 students per batch. Evening classes.
Chaddar	Free stitching school for needy women. Daily 9:00 am to 12:00 pm. Certification and stitching skills.
CSP (Child Sponsorship Program)	Monthly donations that fund Pehla Qadam, IT Box and Chaddar.

Yearly projects

Project	Key facts
Ramadan Ration Drive	Complete food packages for needy families, in 2 phases during Ramadan each year.
Uniform Distribution Drive	Sweaters, shirts, pants and shoes for children in six nearby government schools.
Stationery Distribution Drive	Books, pens and supplies for the same six schools.
Lihaf Drive	2 phases. Warm clothes and lihaf for needy and underprivileged people in winter.
Fee Cases and Family Support	Handled case by case, when possible. Shown publicly only as a general description, never with personal details.

Teams

Pehla Qadam, IT Box, Chaddar, CSP, Survey, Distribution, Media and Coverage, Graphics, Project Management, Documentation.

8. User Flows

Flow A: Visitor to Donor (one-time donation)

1. Visitor lands on Home and sees impact counters and the Donate button.
2. Opens the Donate page and chooses a purpose: General, Pehla Qadam, IT Box, Chaddar, Ration Drive, Uniform Drive, Lihaf Drive, or Zakat/Sadqah.
3. Enters amount, name, phone and email (with an anonymous option).
4. The page shows payment details (Easypaisa, JazzCash, bank account).
5. Donor pays outside the website, then uploads the payment screenshot.
6. The form is saved with status **pending** and the donor sees a confirmation message.
7. The admin checks the proof in the dashboard and marks it **verified** or **rejected**.
8. The donor receives a thank-you email or a rejection email with the reason.

Flow B: Child Sponsorship (monthly)

1. Visitor opens the CSP page, which explains how sponsorship works and where the money goes.
2. Chooses a monthly amount (for example fixed tiers plus a custom amount).
3. Fills the sponsor form and uploads the first month's proof.
4. Admin verifies it and creates a **sponsorship record**.
5. Each month the system shows the CSP team who has paid and who is due, and sends a reminder email to sponsors.
6. Sponsors can receive a monthly or annual update on how the program is going. The update is **general**, with no child identified without guardian consent.

Flow C: Volunteer Application

1. A UET student opens Join a Team and picks a team (for example Media, Graphics, Documentation).
2. Fills the form: name, registration number, department, semester, phone, email, skills, portfolio link and reason.
3. Saved as **pending**. The Project Management team reviews it in the admin panel.
4. Status becomes **interview / accepted / rejected**, and an email is sent.

Flow D: Family or Student Looking for Admission (information only)

1. Visitor opens the program page (Pehla Qadam, IT Box or Chaddar).
2. Reads the timings, location, eligibility, what to bring and when the next admission period starts.
3. If admissions are open, a notice banner appears (managed by admin): **Admissions open. Visit us in person near Gate 2, UET Taxila.**
4. Visitor comes physically, and admission is handled offline by the program team and the Survey Team.
5. There is no online form and no personal data collection.

Flow E: Certificate Verification

1. Anyone opens Verify Certificate and enters the certificate ID printed on an IT Box or Chaddar certificate.
2. The site shows name, program, batch and issue date if the certificate is valid, or a clear "not found" message.

3. This protects the society and the graduates against fake certificates.

Flow F: Admin Content Publishing

1. Admin logs in, and the dashboard shows pending donations, pending volunteer applications and unread messages.
2. After a drive, the Documentation or Media team adds a **drive edition** with year, phase, counts, photos and report.
3. The admin updates the impact counters, publishes a news post, and the public pages update automatically.

Flow G: Link With the Separate Ration and Uniform Web Apps

- The Ration and Uniform apps collect beneficiary data privately and run on their own.
- After each drive, the final numbers (families helped, packs delivered, uniforms given) are **entered manually** into the main site as a drive edition.
- Optional later step: both apps use the same Neon project but a separate schema, and the main site reads only aggregated totals through a small internal API. Personal data is never exposed to the public site.

Flow H: Yearly Cabinet Changeover

1. After the new Cabinet is finalized, the Super Admin creates a new **session** and marks it current.
2. The Documentation team adds each person with photo, level, team and body (Cabinet or Junior Cabinet).
3. The previous session is closed and stays in the Cabinet archive.
4. The About, Teams and Cabinet pages switch to the new session automatically.

9. Page-by-Page Content

Page	Sections
Home	Hero with tagline and Donate button. Impact counters (children taught, certificates issued, packs distributed, years of service). Project cards. Success story slider. Latest drive or news. Partner strip (UET Taxila). Call to action: Donate and Join.
About	Mission, vision, timeline (founded 2014 to today), link to the full founding story, "only official welfare society of UET Taxila", five-level hierarchy, faculty advisor, current Cabinet and Junior Cabinet, link to the Cabinet archive.
Projects (index)	Two groups: Regular (daily) and Yearly. Card for each with an image and short description.
Pehla Qadam	Overview, free of cost, 70+ children, nursery to matric, evening classes, location near Gate 2, volunteer-teacher hierarchy, annual results, pass-out stories, photos, how to get admission (in person), Sponsor a Child button.
IT Box	Overview, free computer training, 2 batches per year for boys and 2 for girls (separate classes), 25 to 30 students per batch, evening timing, certificates, freelancing guidance, past batches and graduate stories, how to get admission (in person), certificate verification link.
Chaddar	Overview, free stitching school for needy women, daily 9:00 am to 12:00 pm, certification, skills taught, women's success stories, how to get admission (in person).
CSP	How sponsorship works, tiers, where the money goes, Sponsor now button, FAQ, optional donor wall (with consent).

Page	Sections
Drive pages (Ration, Uniform, Stationery, Lihaf)	What the drive is, number of phases, how it works, team roles, year-by-year archive with counts, photos and downloadable report. Donate to this drive button. No beneficiary data.
Fee Cases and Family Support	General description of the support, how donors can contribute, no names or personal details.
Teams	Card for each of the 10 teams: responsibilities, current lead, join button.
Impact	Year filter, totals per project, charts, yearly PDF reports, success stories, Pehla Qadam results.
Gallery	Albums per event or drive, photos and videos with captions.
News / Blog	Updates, event coverage, announcements (for example admissions open notices).
Donate	Purpose selection, amount, donor details, payment instructions, proof upload.
Join a Team	Volunteer form (see Flow C).
Verify Certificate	ID lookup (see Flow E).
Contact	Form, WhatsApp, email, social links, map to Gate 2, UET Taxila.

10. Feature List

Must have (version 1)

- All public pages with a responsive, mobile-first design
- Donate and CSP flow with manual payment proof
- Volunteer application
- Contact form

- Admin panel with login and roles
- Impact counters, gallery, news, stories and results
- Certificate verification
- SEO basics and fast image loading

Nice to have (later)

- Urdu and English language switch
- Automatic monthly sponsor reminders and PDF receipts
- Online payment gateway
- Public donor wall
- Result lookup by roll number
- Integration with Ration and Uniform apps (aggregated totals only)
- WhatsApp click-to-chat button

11. Tech Stack

Layer	Choice	Why
Framework	Next.js (App Router) with TypeScript	SEO, speed, one codebase for frontend and backend
Styling	Tailwind CSS with shadcn/ui	Fast, consistent UI
Database	Neon Postgres	Serverless, free tier, branching for dev and prod
ORM	Drizzle ORM (or Prisma)	Type-safe, works well with Neon
Auth	Auth.js (NextAuth)	Admin login with roles
File storage	Cloudinary or UploadThing	Store only URLs in the database
Forms	React Hook Form and Zod	Validation on client and server
Email	Resend	Thank-you and status emails
Spam protection	Cloudflare Turnstile and rate limiting	Protect public forms
Hosting	Vercel	Easy deploys, free tier to start

Layer	Choice	Why
Analytics	Vercel Analytics or Plausible	Visitor insights

Payments in Pakistan: automated gateways need business paperwork. Start with manual payments (Easypaisa, JazzCash, bank transfer) and proof upload with admin verification. Add a gateway later.

12. Database Schema (Neon Postgres)

Note: there are **no tables for admission or beneficiary applications**. Those are offline, and beneficiary data for drives lives in the separate apps.

```
-- Admin users and roles
users (id, name, email, password_hash, role, team_id, created_at)
  -- role: super_admin | team_lead | editor

-- Projects (regular and yearly)
projects (id, slug, title, type, short_desc, content, cover_image,
          timing, location, admission_note, admissions_open,
          is_active, sort_order)
  -- type: regular | yearly

-- Yearly drive editions, e.g. Ramadan 2026 Phase 1
drive_editions (id, project_id, year, phase, title, summary,
                beneficiaries_count, items_count, amount_spent,
                event_date, report_url)

-- Program batches (public info only, no applicant data)
batches (id, project_id, name, gender_group, start_date, end_date,
         seats, status)
  -- gender_group: boys | girls | women | mixed
  -- status: upcoming | running | completed

-- Certificates for verification
certificates (id, certificate_no, holder_name, project_id, batch_id,
              issue_date, is_valid)

-- Success stories (use only with consent)
stories (id, project_id, person_name, role, quote, content, photo,
         year, is_featured, consent_given)
```

```
-- Pehla Qadam annual results
results (id, year, class_level, student_name, marks, position, photo,
         consent_given)

-- Society story and timeline (founded 2014)
site_pages (id, slug, title, content, updated_at)
  -- e.g. slug = our-story
history_events (id, year, title, description, photo, sort_order)

-- Cabinet system: sessions, people, positions
sessions (id, label, start_year, end_year, is_current, group_photo)
  -- label example: 2025-26
members (id, name, photo, department, reg_no, phone, email)
  -- reg_no, phone, email are admin-only
positions (id, title, level, sort_order)
  -- level: 1 cabinet_and_heads | 2 co_heads | 3 members
  --        4 executive_members | 5 general_members

-- Teams and each session's people
teams (id, slug, name, description, responsibilities, sort_order)
session_members (id, session_id, member_id, position_id, team_id,
              body, is_lead, joined_on, left_on)
  -- body: cabinet | junior_cabinet
  -- one row per person per session keeps the full yearly record

-- Gallery
albums (id, title, project_id, edition_id, event_date, cover)
media (id, album_id, url, type, caption)

-- News / blog
posts (id, slug, title, excerpt, content, cover, author_id,
       published_at, status)

-- Impact counters
impact_stats (id, key, label, value, icon, sort_order)

-- Volunteer applications
volunteer_applications (id, name, email, phone, reg_no, department,
                        semester, team_id, skills, portfolio_url,
                        reason, status, review_notes, created_at)
  -- status: pending | interview | accepted | rejected
```

```
-- Donations and sponsorships
donations (id, donor_name, email, phone, amount, type, project_id,
           method, proof_url, status, is_anonymous, created_at,
           verified_by, verified_at)
  -- type: one_time | monthly_sponsor | zakat | sadqah
  -- status: pending | verified | rejected
sponsorships (id, donor_name, email, phone, monthly_amount,
              start_date, status, last_paid_month)
  -- status: active | paused | ended

-- Fee cases and family support (admin only, private)
support_cases (id, case_type, summary, amount_needed,
               amount_collected, status, is_public)

-- Contact messages
messages (id, name, email, subject, body, is_read, created_at)
```

13. Next.js Folder Structure

```
/app
  /(public)
    page.tsx                    -> Home
    about/page.tsx
    about/story/page.tsx
    about/hierarchy/page.tsx
    cabinet/page.tsx            -> Cabinet archive (all sessions)
    cabinet/[session]/page.tsx  -> one year's Cabinet and Junior Cabinet
    projects/page.tsx
    projects/[slug]/page.tsx    -> project and drive pages
    teams/page.tsx
    impact/page.tsx
    gallery/page.tsx
    blog/page.tsx
    blog/[slug]/page.tsx
    donate/page.tsx
    sponsor/page.tsx
    join/page.tsx
    verify-certificate/page.tsx
    contact/page.tsx
  /admin
    layout.tsx                  -> auth guard
```

```
    page.tsx                    -> dashboard
    projects/ drives/ batches/ certificates/
    volunteers/ donations/ sponsorships/
    stories/ results/ gallery/ posts/
    teams/ sessions/ members/ history/ stats/ messages/ users/
  /api
    donate/route.ts  volunteer/route.ts  contact/route.ts
    upload/route.ts  verify-certificate/route.ts
/components   (ui, forms, sections, admin)
/db           (schema.ts, index.ts, migrations)
/lib          (auth.ts, validators.ts, email.ts, utils.ts)
middleware.ts (protects /admin)
```

Use **Server Components** for public pages (fast and SEO-friendly) and **Server Actions** for forms.

14. Admin Panel

Dashboard: pending donations, pending volunteer applications, active sponsors and monthly total, unread messages, recent activity.

Modules

- **Projects and Drives:** edit descriptions, toggle "admissions open" notice, add drive editions with counts and report.
- **Batches and Certificates:** add batches, issue certificate numbers for verification.
- **Donations and Sponsorships:** view proof, verify or reject, export CSV, track monthly sponsor payments.
- **Volunteers:** filter by team and status, add notes, accept or reject with an automatic email.
- **Content:** stories, results, gallery albums, news posts, team members, impact counters.
- **Messages:** read and reply to contact submissions.
- **Users:** add or remove admins and assign roles.

Cabinet and History modules: create a session, add people with level, team and body, move a person between Cabinet and Junior Cabinet, edit the timeline and the Our Story text. Closed sessions are locked for editors.

Roles

Role	Access
Super Admin	Everything, including users
Team Lead	Content and records of their own team
Editor	Posts, gallery and stories only (Media and Documentation teams)

15. Who Does What

Team	Website responsibility
Graphics	Logo variants, color theme, banners, social images, certificate design
Documentation	Page text, story write-ups, reports, captions
Media and Coverage	Photos, videos, albums, social links
Project Management	Timeline, review of volunteer applications, coordination with developers
CSP	Verify donations, track sponsors
Survey, Distribution	Provide drive results to be entered after each drive
Pehla Qadam, IT Box, Chaddar	Provide results, batch information, success stories, certificate lists
Developers	Build, deploy and maintain

16. Security and Privacy

- Validate all inputs with Zod on the server as well as the client.
- Hash passwords with bcrypt or argon2, protect `/admin` with middleware and role checks.
- Add rate limiting and Cloudflare Turnstile to the Donate, Join and Contact forms.
- Restrict upload type and size for payment proof, and store proof in a private bucket.

- Keep secrets in `.env` (`DATABASE_URL`, `AUTH_SECRET`, email and storage keys), never commit them.
- Use Neon branches for development so live data is never touched in testing.
- **Children's privacy:** never publish a child's full name, face, address or school without written guardian consent. Use first names or initials where consent is missing.
- Keep `support_cases` private. The public page only shows a general description.
- Publish a simple Privacy Policy and Donation Policy page.
- Take regular database backups (Neon point-in-time restore) and keep at least two admins.

17. Build Roadmap

Phase	Tasks	Time
1. Foundation	Create Next.js app, Tailwind, Neon database, Drizzle schema, deploy to Vercel	2 to 3 days
2. Design	Color theme, typography, logo usage, page layouts (Graphics team)	3 to 5 days
3. Public pages	Home, About, Projects, Teams, Contact with static content first	1 to 2 weeks
4. Dynamic content	Connect the database for projects, drives, impact, stories, gallery, news	1 week
5. Forms	Donate and sponsor with proof upload, volunteer form, contact form, emails	1 week
6. Admin panel	Auth, dashboard, content management, donation and volunteer workflows	1 to 2 weeks
7. Certificate verification and results	Certificate import, lookup page, Pehla Qadam results	3 to 4 days
8. Polish and testing	SEO, mobile testing, performance, accessibility, security review	3 to 5 days
9. Launch	Custom domain, announcement on social media, UET sharing, feedback	Ongoing

Total estimate for a small team working part-time: about 6 to 8 weeks.

The Our Story, Cabinet archive and session management pages add roughly 3 to 4 days to the build. Collecting Cabinet records back to 2014 is the longer task, so the Documentation team should start early.

18. Launch Checklist

- [ ] All 10 teams' content reviewed by their leads
- [ ] Real impact numbers confirmed (children, batches, certificates, packs, uniforms)
- [ ] Photos have guardian consent where children appear
- [ ] Payment account details verified by the society leadership
- [ ] Admin accounts created, passwords strong, roles assigned
- [ ] Forms tested end to end (donation, volunteer, contact, emails)
- [ ] Mobile and slow-network testing done
- [ ] Page titles, descriptions, Open Graph images and sitemap added
- [ ] Privacy Policy and Donation Policy published
- [ ] Custom domain and HTTPS working
- [ ] Backup and handover notes written for future sessions

19. Maintenance and Handover

Student societies change leadership every session, so plan for continuity:

- Keep one **handover document** with logins, hosting accounts, domain details and a short admin guide.
- Register the domain and hosting under the society's official email, not a personal one.
- Assign a faculty advisor or senior member as a backup super admin.
- Update impact counters and add a drive edition right after every drive.
- Review donations weekly and volunteer applications monthly.

20. Next Steps

1. Confirm the website name, domain and official contact details.
2. Graphics team finalizes the theme and logo files.
3. Documentation team collects the text, numbers and success stories (with consent).

4. Developers set up the Neon database and Next.js project, starting with Phase 1.
5. Review a first working version with the whole society before launch.
